WHAT WE DO

We help private and public clients navigate the energy transition by offering rigorous economic modelling, data-driven scenario analyses, and deep regulatory insight. This enables our clients to make well-informed, robust decisions in an environment characterised by rapidly changing business needs and regulatory frameworks.

Creating actionable insights from hard facts

We combine sector expertise with **state-of-the-art economic tools to evaluate how regulations, policies, and investments shape real-world outcomes across global value chains**. This helps our clients understand the **implications of geopolitical shifts or policy interventions** on businesses and society, and to **assess the economic viability of decarbonisation investments**.

Our analyses offer hard facts and a clear narrative, giving perspectives on **how resilience and security of supply fit into business models or regulatory challenges** – critical factors in today's energy landscape.

Copenhagen Economics assists clients in the private and public sectors by providing insights into business cases and regulatory effects to help them:

- Understand the competitive landscape - now and in the future
- Assess potential future market or regulatory outcomes and their impact on costs and revenues
- Build resilience against supply shocks and global value chain disruptions.

Whether you are evaluating your transition strategy or designing policies to promote resilient energy systems, we have the expertise and resources to help you make better decisions in a rapidly changing environment.

OUR EXPERTISE IN DETAIL

ENERGY MARKET DESIGN

We provide guidance on the economics of energy markets and how they are affected by the growing presence of renewable energy sources and vastly growing energy demand. In particular, we advise on optimal grid capacity use, demand side flexibility, efficient tariffs, and grid queue management.

UTILITY SECTOR REGULATION

We offer support in efficiently regulating utilities by conducting thorough cost analyses. Our approach ensures that regulatory measures align with the specified market outcome objectives.

CLIMATE POLICY FRAMEWORKS

We assess the economic impacts of climate policies at societal, industrial, and business levels. We support public clients in designing efficient climate policies and help companies navigate current and future frameworks, including carbon pricing and supply-chain shocks.

CLIMATE SCENARIO MODELLING

We perform tailored and detailed scenario modelling and forecasts using **Intersect**, our in-house global economic, general equilibrium model and other state-of-the-art economic tools.

RENEWABLE ENERGY SUPPORT MECHANISMS

Working with our State aid team, we advise regulators and companies on designing and participating in competitive bidding processes and compliance with State aid rules. We help companies develop effective bid strategies shaped by fundamental economic drivers for investment decisions.

Copenhagen Economics is an expert-driven consulting company built on a deep knowledge of applied economics, and one of the leading economics firms in Europe. We believe sound economic analysis can equip decision-makers with the hard facts and clear stories to make better choices for the benefit of society.
